Manage your Security Program in One Platform

There isn't a silver bullet when it comes to protecting your environment. That's why it's important to take a layered approach to cybersecurity. The problem is, more cybersecurity tools increase the complexity of your security program. While some tools may allow you to consolidate a few of your technologies, none have the capability to bring your entire cybersecurity program into one platform...until now.

## Challenges cybersecurity professionals often encounter include:

- Lack of visibility across their entire security tech stack, forcing them to "swivel chair" between different applications and dashboards
- Correlating alerts for better insight and prioritization of what to focus on now
- Having a holistic view of where their biggest threats are
- Determining where to focus their next security dollar for continuous improvement

It's these challenges that spurred Nuspire to develop a first-of-its kind platform that provides the foundation on which we deliver your services: myNuspire myNuspire is the bedrock of the Nuspire experience. A software-enabled operations platform, myNuspire fully integrates your security tools and services into one view, delivering unprecedented visibility and the power to use real-time data to inform changes in your security program.

- Built by CISOs for CISOs
- · Brings together your security services into one view
- Is technology-agnostic, allowing you to use a mix of best-in-breed technology partners, as well as purchase new services directly through the platform
- Includes persona-based dashboards that can be customized to your needs
- Tailored to your specific industry and the attackers that focus your vertical
- Leverages threat modeling and program situational awareness to know what controls to focus on, the most prevalent attack methods and vectors where they lurk
- Created for any organization, no matter where you are in your security journey
- Provides current and past security threats via Nuspire's Threat Brief publications, including what you need to do to eliminate the vulnerability

### **my**nuspire

Powered by its myNuspire platform, Nuspire enables you to bring your entire security program together to:

- Increase the effectiveness of your existing security investment
- Eliminate blind spots
- Access intelligence, insights and recommendations you can use to build a smarter and more cost-effective security program

Learn more about Nuspire and how we're revolutionizing cybersecurity program management through our software-enabled myNuspire platform at Nuspire.com.

Ready to talk? Give us a call at 877-435-1640.

# Interested exploring the myNuspire platform on your own? Click here to register.

It takes about two minutes to sign up and is currently at no cost to you.

#### What's the technology behind myNuspire?

myNuspire is built on modern technology that gives you the power to see and adjust any part of your security program.

Nuspire<sup>™</sup> Cyber X Platform: Nuspire's highlyscalable, cloud-based technology that forms the backbone of myNuspire. CXP enriches security alert information by correlating incidents against Nuspire threat intelligence data derived from in-house analysis and collaboration with open and closed source vendors. The enriched information offers greater context into attack vectors and indicators of compromise for both SOC analysts and your organization.

Nuspire<sup>™</sup> Security Program: NSP delivers a customized, constantly updated security blueprint to help you build, maintain and improve your security program over time. It leverages well-known frameworks in a proprietary combination to support self-assessments specific to your organization and industry. The best part? It gives clear, data-rich information on where you should spend your next security dollar, and if Nuspire doesn't offer the service, we can refer you to someone who can.

#### Nuspire<sup>™</sup> Threat Modeling Tool: TMT is

Nuspire's proprietary tool that leverages the power of the MITRE ATT&CK Framework with specialized triangulations to provide actionable insights into industry-specific threat landscapes, threat actors, techniques and attack vectors. This allows you to prioritize risk remediations in context with your security program and proactively protect your organization from emerging threats.

**Combined Insights:** Our robust analytics platform provides a way to correlate your connected security tools, as well as gives you prioritized recommendations with context to quickly make improvements to your security program. It combines your technology and source data with our threat intelligence to equip you with security insights unique to your organization. This helps you see where you have gaps and/or overlaps to determine more effective uses of your limited resources.
